Tasks and Responsibilities

1-) Automating and orchestrating workloads across multiple public cloud providers.
2-) Proficiency in dealing with the most prominent programming languages such as Python and Ruby.
3-) proficient in leveraging **CI** and **CD** tools to automate testing and deployment.
4-) Develop tooling and processes to drive and improve customer experience.

Scientific workshops

International Computer Driving License

For a period of 112 hours, Obtained excellent grade.

Python programming language

For a period of 6 weeks, Obtained good grade.

Database

For a period of 30 hours, Obtained very good grade.

Profile

The DevOps profession is focused on developers and the IT staff to oversee the code releases. Developers either get interested in deployment and network operations or sysadmins who have a passion for scripting and coding and move into the development side where they can improve the planning of test and deployment.
